

TABLE OF CONTENTS

VOLUME 1

| | |
|--|--|
| Organisers: Mining Engineering Department, University of Chile and Gecamin Ltd. | |
| Committees..... | |
| Foreword..... | |
| Preface..... | |
| Acknowledgements..... | |
| List of Participants | |

PLENARY

The Boletín de Geoestadística (1972-1973): A first Journal Devoted to Geostatistics

M. Dagbert and A. Maréchal

An Overview of the Challenges of Multiple-Point Geostatistics

J.M. Ortiz

Bayesian Spatial Sampling Design

J. Pilz and G. Spöck

Simulation of Geological Uncertainty, Resolution Porphyry Copper Deposit

G. Verly, K. Brisebois and W. Hart

Plurigaussian Simulation of Rock Fractures

C. Xu and P.A. Dowd

Preserving Prior Information in Inverse Stochastic Modeling, or not?

J. Fu and J.J. Gómez-Hernández

Simulating Categorical Random Fields Using the Multinomial Regression Approach

D. D'Or, D. Allard, P. Biver, R. Froidevaux and A. Walgenwitz

Multivariate Uniform Conditioning and Block Simulations with Discrete Gaussian Model, Application to Chuquicamata Mine

J. Deraisme, J. Rivoirard and P. Carrasco

MPS Simulation in a Gibbs Sampler Algorithm

S. Lyster and C. Deutsch

Lithology Fluid Inversion from Prestack Seismic Data

M. Ulvmoen

Sequential Simulation of Geologic Variables with Non-Gaussian Correlation

J.G. Manchuk and C.V. Deutsch

Distance-based Random Field Models: Theory and Applications

J. Caers

Model Based Block Kriging to Estimate Spatial Abundance of Wildlife Populations from Count Data

E. Bellier and P. Monestiez

3D Stochastic Simulation of Fracture Networks Conditioned both to Field Observations and a Linear Fracture Density

J.A. Almeida and S. Barbosa

Testing for Spatial Asymptotic Independence of Extremes Using the Madogram

J-N. Bacro, L. Bel and C. Lantuéjoul

How Can Geostatistics be Tailored to the Analysis of Environmental Health Data?

P. Goovaerts

A Survey of Random Field Models for Simulating Mineral Grades

X. Emery and F. Kremer

Estimation of Long-Term Volcanic Hazard Using a Cox Process with a Multivariate Potential

O. Jaquet, C. Lantuéjoul and J. Goto

A Class of Spatial Multivariate Models Based on Copulas

D. Marcotte and E. Gloaguen

Multidimensional Scaling and Anisotropic Covariance Functions

A. Almendral, P. Abrahamsen and R. Hauge

Multivariate Density Estimation as an Alternative to Probability Combination Schemes for Data Integration

S. Hong, J.M. Ortiz and C.V. Deutsch

Observation Network Design for Environmental Variables Using a Copula Based Approach

A. Bárdossy, J. Li and L. Guenni

Non-stationary Multiple-point Simulation of Complex Deltaic Deposits for Reservoir Models

D. Khan, S. Strebelle, D. Hanggoro, B. Willis and M. Pyrcz

Conditional Wavelet Based Simulation of Non-stationary Geology Using Geophysical and Model Analogue Information

E. Gloaguen and R. Dimitrakopoulos

Additivity, Metallurgical Recovery, and Grade

P. Carrasco, J-P. Chilès and S. Séguret

Simultaneous Conditioning of Multiple Non-Gaussian Geostatistical Models to Highly Non-linear Data Using Distances in Kernel Space

K. Park, C. Scheidt and J. Caers

Markov Mesh Simulations with Data Conditioning through Indicator Kriging

H. Kjønsgberg and O. Kolbjørnsen

THEORY

Multivariate Simulation Using Min/Max Autocorrelation Factors: Practical Aspects and Case Studies in the Mining Industry

O. Rondon and T. Tran

Collocated Co-simulation Using Probability Aggregation

G. Mariethoz, P. Renard and R. Froidevaux

Heterotopic Bi-categorical Variables in Plurigaussian Truncated Simulations

D. Renard, H. Beucher and B. Doligez

Cokriging of Compositions: Log Ratios and Unbiasedness

R. Tolosana-Delgado, J.J. Egozcue and V. Pawłowsky-Glahn

Data Harmonization with Geostatistical Tools: A Bayesian Extension

O.P. Baume, J.O. Skøien, G.B. Heuvelink and E.J. Pebesma

Litho-type Modelling Using Soft Probabilities from Seismic Attributes and other Sources of Information

P. Biver, D. Allard and D. D'Or

Using Geostatistics to Describe Complex A Priori Information for Inverse Problems

T.M. Hansen, K. Mosegaard and K. Cordua

An Assessment of the Tau Model for Integrating Auxiliary Information

T. Chugunova and L-Y. Hu

Downscaling with Training Image and Search Tree Partitioning

A. Boucher and L. Stright

Bayesian Extension of Empirical Maximum Likelihood Kriging

E. Pardo-Igúzquiza and P.A. Dowd

Two New Approaches to Avoid Large Kriging Weights to End Samples in Strings of Data

O. Babak and C.V. Deutsch

Kriging Prediction of Curves when Spatial Data are Curves: An Extension of Cokriging to Functional Data

P. Monestiez and D. Nerini

Non-stationary Spatial Modeling Using Harmonic Analysis

G. Spöck and J. Pilz

The D-vine Creation of Non-Gaussian Random Fields

O. Kolbjørnsen and M. Stien

Microergodicity and Geostatistical Simulations

M. Alfaro

A New Approach to SGS with a Trend: A Non-stationary Gaussian Transformation

J.A. McLennan and C.V. Deutsch

Higher Order (HO) Spatial Estimation and Stochastic Simulation of Continuous Properties with Cumulants and HO Non-Gaussian Distributions

J.A. Vargas-Guzmán

High Order Spatial Statistics: Exploring Spatial Random Fields and Cumulants for Modelling Complex, Non-linear and Non-Gaussian Phenomena

R. Dimitrakopoulos, E. Gloaguen and H. Mustapha

Spatio-temporal Modeling of Landscape Variograms

D. Allard and S. Garrigues

Conditional Simulation of a Cox Process Using Multiple Sample Supports

G. Brown, J. Ferreira and C. Lantuéjoul

Defining a Random Function from a Given Set of Model Realizations

C. Scheidt, K. Park and J. Caers

Prediction of a Multivariate Spatial Random Field with Continuous, Count and Ordinal Outcomes

P. Chagneau, F. Mortier, N. Picard and J-N. Bacro

A Kernel Type Estimator of the Multivariate Variogram

M. El-Ghaidouni, J.J. Egozcue and V. Pawlowsky-Glahn

Location Dependent Variograms

D.F. Machuca-Mory and C.V. Deutsch

Robust Ensemble Kalman Filter for High Dimensional Data

I. Myrseth

Combination of the Geostatistical Analysis and the Geo-structural Clustering Method to Generate a 3D Stochastic Model of Fractured Rock Masses

A. Rafiee and M. Vinches

A Stochastic Methodology for 3D Cave System Modeling

V. Henrion, J. Pellerin and G. Caumon

Estimating Fracture Density from a Linear or Areal Survey

J-P. Chilès, H. Wackernagel, H. Beucher, C. Lantuéjoul and P. Élion

Fracture System Modelling and Fractured Aquifer Simulation

H. Mustapha and R. Dimitrakopoulos

VOLUME 2

PETROLEUM

Upscaling Improvement for Heterogeneous Fractured Reservoir Using a Geostatistical Connectivity Index

M. Delorme, B. Atfeh, V. Allken and B. Bourbiaux

Optimal Updating of Reservoir Facies Models by Integrating Seismic and Production Data

D. Echeverria, E.T. Santos and T. Mukerji

Factorial Kriging for Seismic Data Filtering, Review of Applications and Comparison with other Techniques

T. Coléou and R. Soubaras

Influence of Ensemble Geostatistics on Production History Matching and Prediction at New Wells

E. Peters, O. Leeuwenburgh and R. Hanea

Conditioning Facies Simulations with Connectivity Data

P. Renard and J. Caers

Advances in Quantification of Process-based Models for Meandering Channelized Reservoirs

J. Rivoirard, I. Cojan, D. Renard and F. Geffroy

Advances in Stochastic Surface Modeling of Deepwater Depositional Systems

X.K. Zhang, M.J. Pyrcz and C.V. Deutsch

Geomodelling of a Fluvial System with Semi-supervised Support Vector Machine

V. Demyanov, A. Pozdnoukhov, M. Kanevski and M. Christie

Nanoscale Pore Structure of Carbonate Rock Reconstructed by Geostatistical Approach

H. Okabe

New Geologic Grids for Robust Geostatistical Modeling of Hydrocarbon Reservoirs

E. Gringarten, B. Arpat, S. Jayr and J-L. Mallet

3D Marine Sedimentary Reservoir Stochastic Simulation Accounting for High Resolution Sequence Stratigraphy and Sedimentological Rules

P. Kedzierski, G. Caumon, J-L. Mallet, J-J. Royer and P. Durand-Riard

Spectral Seismic Signatures and Uncertainties in Petrophysical Property Estimation of Thin Sand-shale Reservoirs

P. Dejtrakulwong, T. Mukerji and G. Mavko

Geostatistics on Stratigraphic Grids

A. Bertoncello, J. Caers, P. Biver and G. Caumon

Streamline Assisted History Matching of Naturally Fractured Reservoirs Using the Probability Perturbation Method

S. Fadaei, M.R. Thiele and J. Caers

Scale-corrected Ensemble Kalman Filter for Observations of Production and Time-lapse Seismic Data

J. Saetrom

Assessment of Net-to-gross Uncertainty at Reservoir Appraisal Stage: Application to a Turbidite Reservoir Offshore West Africa

A. Maharaja, A. Journal, G. Caumon and S. Strebelle

Application of Geostatistical Simulation and the Neighbourhood Algorithm in Fluvial Reservoir

R.A. Archer and E.E. Bassey

MINING

Accounting for Different Sampling Errors in Exploration Drilling Campaigns in Resource/Reserve Modeling

M.A. Cuba, J.M. Ortiz and O. Leuangthong

Uncertainty Grade Assessment for Short and Medium-term Mine Planning of Underground Mining Operations

W. Assibey-Bonsu, L. Tolmay and D. Krige

Conditional Simulations to Predict Ore Variability and Homogenization Pile Optimal Size: A Case Study of an Iron Ore Deposit

D.T. Ribeiro, R. Stangler, M. Vidigal, J.F.C.L. Costa and D. Marques

Financial Risk Assessment Using Conditional Simulations in an Integrated Evaluation Model

G. Nicholas, S. Coward and J. Ferreira

Simulation of Grade Control, Stockpiling and Stacking for Compliance Testing of Blending Strategies

C. Neufeld, C.V. Deutsch and G. Lyall

Modelling the Stone Size Distribution of a Diamond Deposit

C. Lantuéjoul and M. Millad

Geological Control in Grade Simulation: A Comparative Study

D. Silva and X. Emery

In the Shade of the Truncated Gaussian Simulation

V. Langlais, H. Beucher and D. Renard

Application of Categorical Variables to Improve Estimation in the Amapari Lateritic Gold Mine, Brazil

F.J. da Silva, L.P. Braga, C. G. Porto and A.R. Nunes

Truncated Gaussian and Plurigaussian Simulations of Lithological Units in Mansa Mina Deposit

R. Riquelme, G. Le Loc'h and P. Carrasco

ENVIRONMENT AND HYDROLOGY

Unbiased Block Predictions and Exceedance Probabilities for Environmental Thresholds

J.O. Skøien, G.B. Heuvelink and E.J. Pebesma

Geostatistical Model for Air Quality Surveillance/Monitoring

A. Russo, A.O. Soares, M.J. Pereira and R. Trigo

Geostatistical Challenges Encountered in Mapping Indoor Radon Concentrations

P. Bossew and G. Dubois

Geostatistical Analysis of Validation Data of an Air Pollution Simulator

J-P. Chilès, S. Séguret and P-M. Riboud

Geostatistical Model for Concentrations or Flow Rates in Streams: Some Results

E. Lefebvre, C. de Fouquet, C. Bernard-Michel, N. Flipo and M. Poulin

Mass Transfer Models, as a Tool for Upscaling Solute Transport in Heterogeneous Formations

G. Llerar-Meza, D. Fernández-García and J.J. Gómez-Hernández

Geostatistical Analysis of Hydraulic Conductivity Fields Using Copulas

C.P. Haslauer, A. Bárdossy and E.A. Sudicky

Simulation of Hydraulic Head Fields Compatible with a Hydrogeological Conceptual Model

D. Marcotte, M. Rivest, P. Pasquier and V. Bouzaglou

Gradual Deformation Method for the Estimation of Flow Parameters in Subsurface Hydrology

E. Mouche, P. Maugis and P. Zakharov

OTHER APPLICATIONS

Combining Geostatistics with Finite Element Modelling for Geomechanical Risk Assessment

T. Hu, F. Fournier and J-J. Royer

Data Integration Model for Soil Degradation Risk Assessment

A. Horta and A. Soares

Towards Soil Parameter Identification Including Soil Heterogeneity

A. Hommels, F. Molenkamp and I. Kroon

Tools and Methods for Constructing 3D Geological Models in the Urban Environment. The Paris Case

B. Bourguine, A-M. Prunier-Leparmentier, C. Lembezat, P. Thierry, C. Luquet and C. Robelin

Characterisation of a Hydrocarbon Polluted Soil by an Intensive Multi-scale Sampling

C. Faucheux, E. Lefebvre, C. de Fouquet, Y. Benoit, B. Fricaudet, C. Carpentier and J-C. Gourry

Geostatistical Modeling of the Scallop Density Distribution in Shark Bay, Western Australia, from Survey Data

U. Mueller, J. Dickson, M. Kangas and N. Caputi

Kriging of the Latent Probability of a Binominal Variable: Application to Fish Statistics

E. Walker, P. Monestiez, D. Renard and N. Bez

Spatio-temporal Modeling of Rainfall Combining Artificial Neural Networks and Geostatistics

O. García-Cabrejo, J. Quijano-Nieto, J. Macias-Acevedo, N. Obregon-Neira and J. Rodríguez-Ordoñez

Developing a Cost-effective Sampling Design for Forest Inventory

X. Emery, J. Hernández, P. Corvalán and D. Montaner

Space-time Geostatistical Analysis of King Prawn Catch Rate

A. Denham and U. Mueller

POSTERS

Geostatistical Estimation and Simulation Studies in the Lateritic Mineral Deposit Punta Gorda, Cuba

J.Q. Cuador-Gil and W. Lavaut-Copa

Implementation of Multivariate Simulation without a Full Model of Coregionalization

O. Babak and C.V. Deutsch

Optimisation Issues in 3D Multiple-point Statistics Simulation

J. Straubhaar, A. Walgenwitz, R. Froidevaux, P. Renard and O. Besson

Shortest Anisotropic Path to Reproduce Complex Geological Features

J. Boisvert and C.V. Deutsch

Uncertainty in the Correlation Coefficient in Presence of Sparse Data and Outliers

E.B. Niven and C.V. Deutsch

An Object-based Multiple-point Connectivity Measure

A. Richmond

Analysis of Uncertainty Introduced by Scale-up of Log-derived Porosity in Carbonate Settings

J.Y. Leung and S. Srinivasan

Direct Transfer of Uncertainty in Reservoir Models — Application to Uncertainty Estimation due to Sub-scale Variance

J.Y. Leung and S. Srinivasan

Multivariate Geostatistics in Complex Iron Ore Deposits

M.N.M. Boezio, J.F.C.L. Costa and J.C. Koppe

Volumetric Characterization of Reservoir Using the Multilayer Approach

S.S. Sancevero, J. Deraisme, O.S. Jr. and A.Z. Remacre

The Constraining Conditions of Stochastic Modeling Controlled by Facies for Sedimentary Reservoir

X. Yu, S. Li, J. Chen and G. Hou

Reducing the Number of History Matching Parameters by Decomposing Static Properties into a Trend and a Residual Component

G. Bourgault

A Projected Process Kriging Algorithm for Sensor Networks with Heterogeneous Error Characteristics

B. Ingram, D. Cornford, L. Csató

Non-uniqueness and Uncertainties in the Training Image to Seismic Image Transformation

A. Leiva and T. Mukerji

Integration of Production Data within a Multiple-point Geological Simulation Framework

K. Eskandari and S. Srinivasan

Patched Path and Recursive Servo System in Multiple-point Geostatistical Simulation

T. Zhang, S. Pedersen and D. McCormick

Predicting Forest Fires Risk Maps, with Meteorological and Historical Data by Using the Tau Model

R.M. Durão and A. Soares

Geostatistical Analysis of On-farm Trials in Precision Agriculture

A. Brenning, H. Piotraschke and P. Leithold

Logistic Model Trees: An Alternative Tool to Derive Conditional Distributions from Secondary Information

O. García-Cabrejo and N. Obregon-Neira

A Showcase of Event-based Geostatistical Models

M.J. Pyrcz and S. Strebelle

Data Classification and Information Cataloging of Spatial Systems — An Application to Reservoir Datasets

A. Sharma and S. Srinivasan

How Many Samples Are Required to Estimate a Reliable REML Variogram?

R. Kerry, B.R. Ingram, P. Goovaerts and M.A. Oliver

Functional Kriging: Total Model

R. Giraldo, P. Delicado and J. Mateu

Combining Methods for Geologically Realistic Reservoir Simulation

H.A. Michael, H. Li, T. Li, S.M. Gorelick and J. Caers

Reformulation of Direct Minimum/Maximum Autocorrelation Factors as a Generalised Eigenvalue Problem

E.M. Bandarian and U.A. Mueller

The Benefit of Additional Data Accessed via Transfer Functions

V.C. Koppe, J.F.C.L. Costa and J.C. Koppe

Author index
